New user interface

New front end +
back end APIs

Database
migration

When an new order is added to the system, a notification occurs on the screen for all viewers ("viewers" are predefined set of specific user types that have permission to view said notification).

Does such kinds of notification need to be listed and exist somewhere in the system? Or can they just be "cleared" after viewing? Does it need to link to an order? Should they require immediate action? Who cares most of these types of information (if at all)?

Define interaction

Validate in usability test

Need to define notification systems (Added parking)

There is an
to print the
informa

Need to confirm what should
here. Does the order look

(every hour)

Questionable... I'm looking at the list and all of a sudden it refreshes in front of my eyes. Not sure about user experience.
[@shruti](#) please chime in

15 Aug, 07:02

I agree that a sudden refresh of the list without warning would only confuse the user. I think best is to have a "Lasted update: 34 minutes ago" on the list page.

➤ Creating user journey maps to discover and validate assumptions about how the user uses the product in order to complete tasks

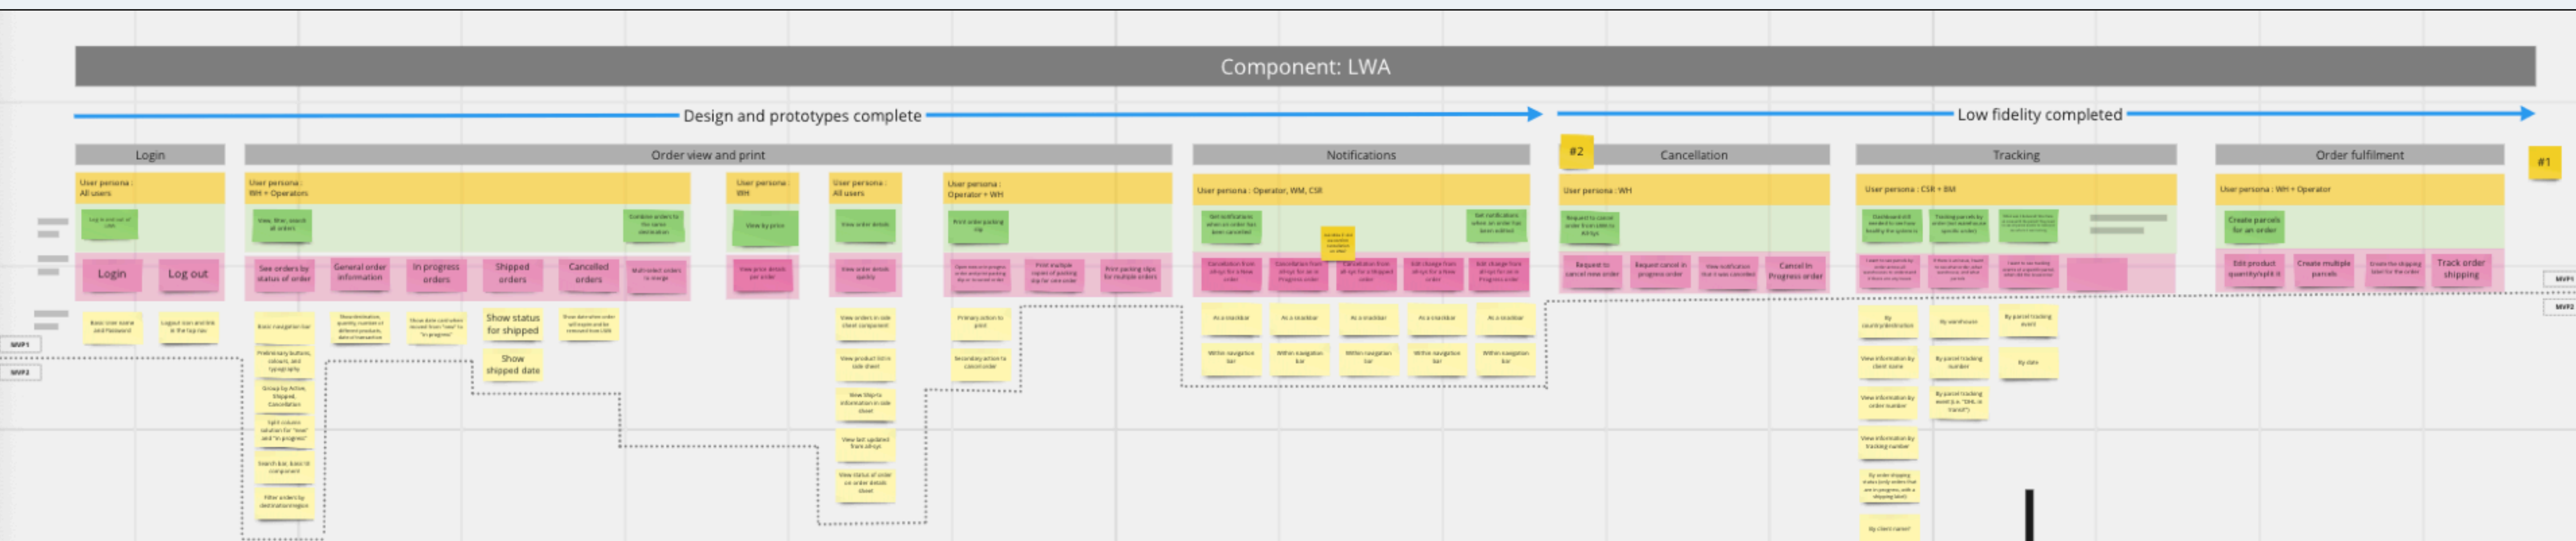

- “Component LWA” map is broken down into 6 interaction experiences which are further broken down into features/requirements per interaction and scheduled for design based on “MVP” requirements

Process for alignment on features

- Mapping the flow of interactions within the system application is a key part of the early stage of the design process

- Creating user journey maps to discover and validate assumptions about how the user uses the product in order to complete tasks
- “Component LWA” map is broken down into 6 interaction experiences which are further broken down into features/requirements per interaction and scheduled for design based on “MVP” requirements

Shipping label page

Understood how to print shipping label and commercial invoice

Success

Commercial invoice

Successfully changed Ship
to address

Success

Shipping label - size and dimensionsShipping label - carrier accountsHIGH 

- Show all carrier accounts
i.e. UPS, DHL
- Show all carrier accounts' respective services
- There will always be one service associated with each respective carrier account
i.e. UPS1-service1, service2,
UPS2-service1, service2
DHL1-service1, service2
DHL2-service2

Shipping label - buttonsMEDIUM

- Update button layout and interaction

User clicked on "create shipping label" disabled button to open "size and courier" accordion

User asked if the application was for commercial invoice for internal purposes or external purposes

Success

Shipping label: size and dimensions

LOW

- Update font and layout
Did not think to view rates without outside assistance from Shristi. Squinted to see rates per carrier option

- Layout needs to be changed

Success
